

## Did You Know?

When you put a shell up to your ear, it sounds like the ocean, but it really isn't. You're actually hearing an echo from all the sounds around you . . . jumbled into a big whoosh. (You can still pretend, though!)

Some beaches are almost completely covered in shells. At Shell Beach (Western Australia) you'll find miles and miles of shells up to 32 feet deep—that's as high as a three-story house.

### Crossword puzzle

Use the clues to complete the crossword with the different types of shells.

#### Across

1. They look like horns.
2. They have hinged shells.
3. They grow in a spiral.

#### Down

4. It's fast like a jet.
5. It has eight overlapping shells.
