

# THE BABY GALAPAGOS

God has put many special habits in the mother Galapagos turtle. We call those special habits "instincts." God has programmed mother Galapagos to work very hard digging a hole to lay her eggs. Over the top of the eggs she packs a layer of mud to keep them just the right temperature. Baby struggles to break out of the egg. Then he must claw out of the hardened mud. At last he is free.

 Help the mother turtle find her baby

**Instructions.** Read page 109 for answers to fill-ins.

A baby turtle struggles from one to \_\_\_\_\_ days to break out of the \_\_\_\_\_ . He takes a \_\_\_\_\_ weeks to claw thru the hardened mud. God has provided a \_\_\_\_\_ sac that is attached to the baby's \_\_\_\_\_ . He gets his \_\_\_\_\_ from this \_\_\_\_\_ so he won't starve to death.
