IN GENESIS®

Hi, I'm Buddy Davis,  
and I'll be your tour guide  
today as we explore some of  
the cool critters of the Ice Age.

This is my sidekick,  
Harry the cave bear.  
Grab your coat, gloves,  
and some hot chocolate,  
and let's go!

Before we go and find the critters, let's talk about how the Ice Age happened.

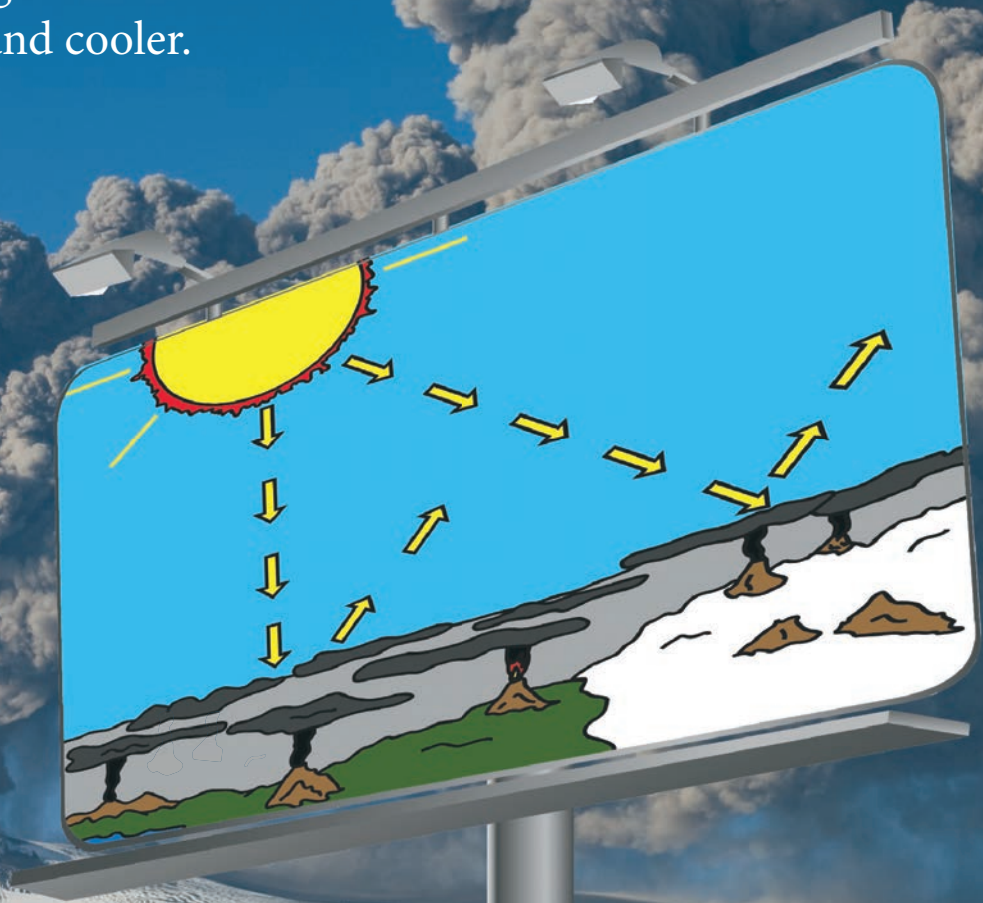

The Flood of Noah's day covered the whole earth and created the perfect environment for an Ice Age.

In Genesis 7:11, the Bible tells us that the fountains of the great deep broke open. That means that there were volcanoes in the ocean, which would have warmed the waters.

At the same time, there were volcanoes on land that shot a lot of ash high into the atmosphere, creating dark clouds that kept sun rays from reaching the land. This would make the land cooler.

Some scientists believe that the Arctic Ocean could have gotten as warm as 80 degrees for a short period of time.

Today if you dipped your toes in the Arctic Ocean, they would freeze! I know from experience . . .

The evaporation, when water became steam and vapor, lowered the oceans as much as 300 feet, forming land bridges. Here, Harry the cave bear is scouting out the land across the ocean.

When a land bridge formed, Harry the cave bear decided to travel from Russia to Alaska just like many other critters, and even people.

This is what the land bridge might have looked like between Russia and Alaska during the Ice Age.

As the water cooled, the oceans rose to their present-day height.

The land bridge is now covered with water.

Snow

Condensation

Evaporation

This picture shows the warmer oceans causing evaporation, which formed clouds that fell as snow in the northern and southern regions and as rain in the central regions.

Warm Ocean

Snow kept falling and falling, eventually turning into glaciers and ice sheets, which are large, slow-moving areas of ice.

You can see how Harry the cave bear might have experienced the buildup of snow. Brrrrr, just thinking about it makes me thirsty for more hot chocolate.

No worries! Harry the cave bear hibernated in an ice cave.

The entire world was not covered with ice. You can see by the white on the map where the areas of the snow and ice are. Can you imagine how cold that would be? Just thinking about it makes me shiver!
