understanding Darwin . . .

PART 1 THE MAN AFTER 200 YEARS

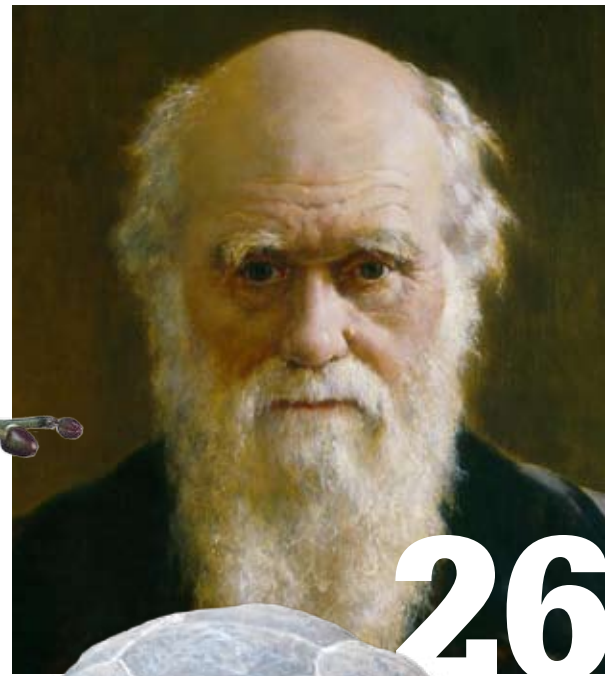

- 26 **The Pursuit of Darwin**
Was Darwin a God-hater bent on overthrowing the Bible? The answer is more complicated than most people think.
- 32 **Darwin's Personal Struggle with Evil**
The death of Darwin's daughter forced him to confront just how much evil is in this world.

PART 2 THE BOOK AFTER 150 YEARS

- 36 **Do Species Change?**
The church in the nineteenth century taught that species did not change, but is that what the Bible teaches?
- 40 **Finding God in Galápagos**
What wonders can we discover on the Galápagos Islands? Because he rejected the Bible, Darwin reached the wrong conclusions.
- 46 **Natural Selection—Theory or Reality?**
How do small variations in species lead to a completely new species? Darwin proposed natural selection, but questions remain after 150 years.
- 60 **God of the Gaps**
Gaps in the fossil record deeply troubled Darwin and challenged his theory. Those gaps still exist today.

PART 3 WHERE NEW SPECIES COME FROM

- 66 **The Evolution of a Revolution**
Evidence of extinct species in the fossil record raised questions that scientists are still trying to answer.
- 70 **Creation's Hidden Potential**
After the Flood, God filled the earth with a great variety of species. Natural selection and mutations can't explain this. So creationists are looking for the real answers.
- 76 **Building a Community for Discovery**
In the Creation Biology Study Group, scientists and theologians are working together to understand God's handiwork in living things.

other features . . .

- 82 **Evolving Tactics**
Over the years prominent evolutionists have turned from debating creationists to just calling them names.
- 86 **Darwin—Unwittingly a “Creationist”**
The scientific arguments of Darwin and other evolutionists must assume the truth of the Bible in order to argue against it.
- 88 **The Discontinuity of Life**
The Creator placed gaps throughout the living world that point to creation, not evolution. ■ **Semi-technical**
- 92 **Orchids—A Bouquet of Adaptations**
The orchid has diversified into about 25,000 different species. Such incredible diversity within a single plant points to the Designer's delight in diversity. ■ **Semi-technical**
- 96 **Rapid Erosion Between Layers**
If millions of years occurred in our past, we should find signs of slow erosion between the rock layers. But we don't. ■ **Semi-technical**

kids answers . . .

In this 8-page *Kids Answers* mini-magazine, children learn interesting facts about the fascinating creatures on the Galápagos Islands.

Find amazing information about:

- The waved albatross
- Created kinds
- Differences between mankind and animals
- Different species of albatrosses, iguanas, and tortoises
